Momani, Bessma. "Gulf Cooperation Council Oil Exporters and the Future of the Dollar." *New Political Economy*, vol. 13, no. 3, Sept. 2008, pp. 293–314, <https://doi.org/10.1080/13563460802302594>.

Bessma Momani's article describes the relationship between Gulf oil exporters and the US dollar. Specifically, how oil exports contribute to the global dominance of the US Dollar. The author argues that after Bretton Woods the petrodollar system was established which then increased international demand for U.S. currency. This is because oil transactions were conducted primarily in dollars and oil-producing nations recycled petrodollars into U.S. financial markets and Treasury securities. There, this further helped support American economic power, leading to US economic dependence on oil. This source is valuable because it is a peer-reviewed academic study that uses economic and political analysis to explain the connection between oil trade and the global role of the dollar.

N. Archer, Deborah. "White Men's Roads through Black Men's Homes *: Advancing Racial Equity through Highway Reconstruction ." *VANDERBILT LAW REVIEW*, vol. 73, no. 1, Oct. 2020, pp. 1259 -- 1330. *HEINONLINE*, heinonline.org/HOL/Page?handle=hein.journals/vanlr73&id=1&collection=journals&index=.

Archer argues that the interstate highway system was used as a tool of racial segregation and destruction. Under "slum clearance," federal and state officials intentionally routed highways through Black communities, destroying hundreds of thousands of homes, displacing Black and Brown families with concentrating

poverty in ways that still persist today. Furthermore, these highways were built as physical walls, separating Black and white neighborhoods to further segregation. Archer discusses cases from many US cities such as Miami, Birmingham, and Atlanta to explain this was not accidental but by design. They then argue that as aging highways are now being rebuilt, current policies are inadequate to prevent the same harms from happening again. Instead we should require them to complete racial equity impact studies before any highway redevelopment begins.

“PUBLIC ROADS On-Line (Summer 1996) - Federal-Aid Highway Act of 1956: Creating the Interstate System.” *Losthistory.net*, 2025, losthistory.net/summer96/p96su10.htm. Accessed 14 May 2026.

Richard F. Weingroff’s “Federal-Aid Highway Act of 1956: Creating the Interstate System” looks at the political, economic, and military motivations behind the creation of the U.S. Interstate Highway System under President Dwight D. Eisenhower. The article explains how the 1956 bill created the national transportation infrastructure by promoting interstate commerce, suburban growth, and national defense preparedness. Weingroff uses a mix of historical records, congressional context, and policy analysis to defend the long-term significance of the highway system in shaping modern American society. This source is useful for research on transportation history, urban development, and federal policymaking because it provides both historical background and analysis of the Interstate System’s broader social and economic effects.
